ARISTO CAST

FINALIST FOR ICI CASTING AWARD!

MIRROR BRACKET

This particular casting is a highly integrated bracket that functions as the eyes of an autonomous vehicle, by holding the advanced radar into position for the vehicle to operated safely. Parts for electric vehicles needs to be made very light, to help increase battery life. We assisted on both the part design, prototypes and production. Using our in-house 3D printers to make the patterns, we were able to provide castings required for testing and initial builds, all while the hard tooling to produce the production level wax patterns was being built.
